

Fellowship Position in Interventional Neuroradiology

Department of Neuroradiology, University Hospital Zurich

The Department of Neuroradiology offers high-level clinical and academic training in Interventional Neuroradiology for one or two fellows on a competitive basis. The duration of the program is two years. Applications are welcome.

The Department of Neuroradiology at the University Hospital Zürich is an internationally renowned academic institution that covers the full spectrum of endovascular and minimally-invasive neuroradiological procedures employing the latest technologies. Our service is provided in close cooperation with all clinical neuro-disciplines including dedicated intensive-care and stroke units and offers unique research opportunities.

We offer an intensively supervised training program with expert mentoring. The successful candidate will become member of our interventional team and will fully participate in the neuroradiological service including on-call and ward services, selected elective procedures, interdisciplinary boards and conferences, research and teaching (academic duties). Additional profits include continuous education and adequate working time compensation.

We are seeking for highly motivated and strongly team oriented board certified radiologists or neuroradiologists (Swiss or EU eligibility), who want to dedicate a high-level training to Interventional Neuroradiology. Academic activities are strongly supported. German language certification level B(2) is required or needs to be provided early within the fellowship.

Please feel free to contact Professor Stippich or PD. Dr. Kulcsar for further details. You may send your application to:
